

## CLAIMS

1. A staple case that contains a roll staple formed by connecting unformed staples in a roll shape.

5 2. The staple case according to Claim 1, comprising:  
a pull-out opening through which the roll staple contained in the staple case is pulled out.

3. The staple case according to Claim 1, comprising:  
10 an opening, formed at a part of the staple case facing a circumferential surface of the contained roll staple, through which a member for rotating the roll staple faces.

4. A staple case for containing staples used for a stapler  
15 comprising:  
a cushion portion provided on the staple case.

5. A staple case for containing staples used for a stapler,  
comprising:  
20 a portion for positioning in a containing chamber.

6. A staple case for containing staples used for a stapler,  
comprising:  
a guide portion for guiding the staple case to a containing  
25 chamber.

7. The staple case according to any one of Claims 1, 4, 5, and 6, wherein the staple case is formed by joining case halves molded by being split into two.

5 8. The staple case according to Claim 7, wherein a weak portion is provided on a joint between the two case halves so that the two case halves can be split.

9. A staple case for containing staples used for a stapler,  
10 wherein a mark indicating the direction of insertion into the stapler is shown on the side face, at least one of the pair of upper and bottom faces and the pair of front and back faces are made different from each other to limit the direction of insertion into a stapler to one direction.
